

ATL-OOM Wire Rope Wear Gauge

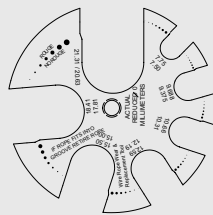

- Anodized aluminum coating to protect against corrosion and wear
- Color coded blue for easy metric tool identification and use
- Convenient, easy to carry size, capable of measuring seven (7) different rope diameters.
- Metric gauge (blue) allows for full range of measurements: 8, 10, 11, 13, 16, 19 and 22 millimeter.
- Precision CNC machined and sized to ASME retirement criteria for wire rope.
- Gauge is also sized to proposed ASME standards for wire rope with rouge.
- Straightforward design and use: As a universal go-no-go gauge, if a specific portion of wires suspected of wear, or rouging, simply place the gauge slot for that particular original diameter over the rope crowns on a straight section. If the rope will not enter the slot, its diameter is considered satisfactory.
- Add your own custom logo, graphic, text, or color (minimum order required)
