

ATL-096 Wire Rope Wear Gauge

A17.1 Specification

Back of gauge

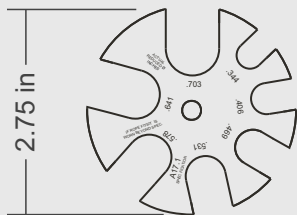

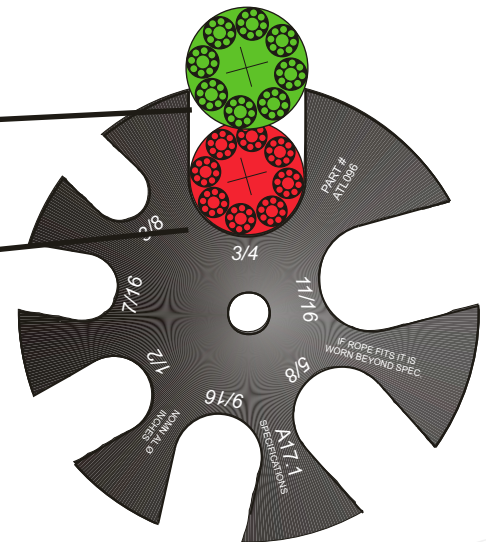

- Anodized aluminum coating to protect against corrosion and wear
- Color coded black for easy imperial tool identification and use
- Convenient, easy to carry size, capable of measuring seven (7) different rope diameters
- Imperial gauge (black) allows for full range of measurements: 3/8, 7/16, 1/2, 9/16, 5/8, 11/16 and 3/4 inch
- Precision CNC machined and sized to A17.1 code specifications for retirement of wire rope.
- Straightforward design and use: As a universal go-no-go gauge, if a specific portion of wire is suspected of wear, simply place the gauge slot for that particular original diameter over the rope crowns on a straight section. If the rope will not enter the slot, its diameter is considered satisfactory.
- Add your own custom logo, graphic, text, or color (minimum order required)

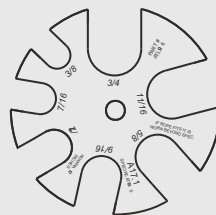

Rope diameter is acceptable for wear.

Diameter loss due to wear exceeds retirement criteria.
